Military Service: Exempted

PROFESSIONAL SUMMARY

Angular Front-End Developer with a proven record of architecting and shipping production-grade applications across E-commerce, ERP, and Educational domains. Deep expertise in Nx Monorepo architecture, Module Federation, NgRx state management, and RxJS reactive programming. Consistently delivers performant, maintainable interfaces that translate complex business requirements into precise, scalable solutions.

TECHNICAL SKILLS

Frontend: Angular (v١٤+) · TypeScript · JavaScript (ES٦+) · HTML٥ · CSS٣

UI & Styling: Tailwind CSS · Bootstrap · Angular Material · PrimeNG · Responsive Design

Architecture: Nx Monorepo · Module Federation · Component-Based Architecture · Lazy Loading · Clean Code

State & Async: NgRx · RxJS · Reactive Forms · HTTP Interceptors · Unit Testing

API: RESTful APIs · HttpClient · GraphQL · Error Handling & Interceptors

Tools: Git & GitHub · Azure DevOps · Azure Pipelines

Languages: Arabic (Native) · English (Professional Working Proficiency)

PROFESSIONAL EXPERIENCE

Frontend Engineer — Part-Time, Remote

٠٧/٢٠٢٥ – Present

1 October Software Company · Egypt

- Led end-to-end development of ٣+ ERP modules and educational platforms in Angular (v١٦+), encompassing reactive form architecture, dynamic data grids, and granular role-based access control across multiple client-facing products.
- Produced pixel-precise, high-performance interfaces in close partnership with UI/UX designers and backend engineers, coordinating delivery and code reviews through structured Azure DevOps workflows.
- Established and maintained a shared component library adopted across ٤+ internal projects, upholding rigorous code quality standards and reducing inter-team code duplication by over ٤٠%.

Angular Frontend Developer — Part-Time, Remote

Verzisa · Saudi Arabia

- Took ownership of core ERP module development, establishing the application's routing structure, shared service layer, and RESTful API integration layer from first principles.
- Implemented centralised HTTP interceptors for JWT lifecycle management and unified error handling, guaranteeing consistent, secure API communication across all application layers.

PROJECTS

Rosr — E-Commerce & Admin Dashboard (Nx Monorepo)

11/2024 – 04/2025

[Angular](#) · [NgRx](#) · [RxJS](#) · [Nx](#) · [Module Federation](#) · [TypeScript](#) · [github.com/Tawfykelgohre888/rosr](#)

- Conceived and implemented a scalable Nx Monorepo architecture with Module Federation, partitioning the Storefront and Admin Dashboard into independently deployable applications with clearly defined boundaries.
- Engineered 1+ shared libraries for UI components, API services, and TypeScript interfaces consumed across both applications, enforcing strict DRY principles and a single source of truth at the monorepo level.
- Orchestrated complex application state — spanning Cart and Analytics across 10+ state slices — via NgRx and RxJS, achieving fully predictable, traceable data flow throughout both platforms.
- Secured both platforms through role-based route guards, token-refresh logic, and end-to-end authentication flows tailored to distinct user permission levels.

Online Exam System

01/2024 – 01/2024

[Angular 16](#) · [RxJS](#) · [Tailwind CSS](#) · [Reactive Forms](#) · [github.com/Tawfykelgohre888/online-exam](#)

- Delivered a fully responsive, timer-driven online examination platform supporting concurrent multi-user exam sessions with real-time countdown and automatic submission functionality.
- Implemented instantaneous result calculation and feedback display upon submission using RxJS observables and Angular Reactive Forms, eliminating page reloads and improving the candidate experience.

Charity Management Website

05/2024 – 07/2024

[Angular](#) · [RESTful APIs](#) · [Reactive Forms](#) · [github.com/Tawfykelgohre888/charity-app](#)

- Developed a fully responsive charitable organisation platform providing an integrated suite of features for donation processing, volunteer registration, and campaign lifecycle management.
- Consumed RESTful APIs to drive dynamic content rendering and implemented comprehensive reactive form validation, presenting clear, contextual error feedback throughout the user journey.

EDUCATION

BSc. Management Information Systems — Delta Academy, Mansoura

09/2019 – 05/2023

Cumulative Grade: Very Good | Graduation Project: Job Recruitment Website (Grade: Excellent)

COURSES & TRAINING

Advanced Angular Bootcamp — Elevate Tech

01/2020 – Present

In Progress: NgRx · Unit Testing · Clean Architecture · AI Integration · Real-World Projects

Frontend Development Track — Route Academy

10/2024 – 02/2025

Intensive programme: HTML · CSS · JavaScript · TypeScript · Angular · RxJS · RESTful API Integration
